Air-Insulated Medium-Voltage Switchgear NXAIR, up to 24 kV

Medium-Voltage Switchgear

Application

Typical applications

HA_00016467.tif

NXAIR circuit-breaker switchgear is used in transformer and switching substations, mainly at the primary distribution level, e.g.:

Application

Public power supply

- Power supply companies
- Energy producers
- System operators.

HA_111185018-1d.tif

HA_1000869.tif

Application

Industry and offshore

- Automobile industry
- Traction power supply systems
- Mining industry
- Lignite open-cast mines
- Chemical industry
- Diesel power plants
- Electrochemical plants
- Emergency power supply installations
- Textile, paper and food industries
- Iron and steel works
- Power stations
- Petroleum industry
- Offshore installations
- Petrochemical plants
- Pipeline installations
- Data centers
- Shipbuilding industry
- Steel industry
- Rolling mills
- Cement industry.

Air-Insulated Medium-Voltage Switchgear NXAIR, up to 24 kV

Medium-Voltage Switchgear

The products and systems described in this catalog are manufactured and sold according to a certified management system (acc. to ISO 9001, ISO 14001 and BS OHSAS 18001).

Customer benefit

Ensures peace of mind

For power supply companies and industrial plants, the platform concept of the NXAIR family introduced at all production locations has very concrete advantages:

Smooth operation,
exemplary availability and
optimal safety.

Features

- No handling of insulating gas and low and high pressure monitoring required
- As insulating medium, air is always available
- Factory-assembled, type-tested switchgear according to IEC 62271-200 or VDE 0671-200
- Platform concept introduced worldwide, centrally controlled development, local manufacture
- Use of standardized block-type current transformers
- Use of standard components available worldwide, locally manufactured components, under consideration of regional standards
- More than 480,000 air-insulated switchgear panels of Siemens in operation worldwide
- Use of maintenance-free vacuum circuit-breakers or contactors
- Type testing of the vacuum circuit-breaker, the vacuum contactor and the make-proof earthing switch in the panel
- Pressure-resistant partitions
- Flexibility regarding the low-voltage equipment (removable compartment, plug-in wires)
- Quality assurance in accordance with DIN EN ISO 9001.

All switchgear types of the NXAIR family are approved with internal arc classification IAC A FLR, loss of service continuity category LSC 2B and partition class PM.

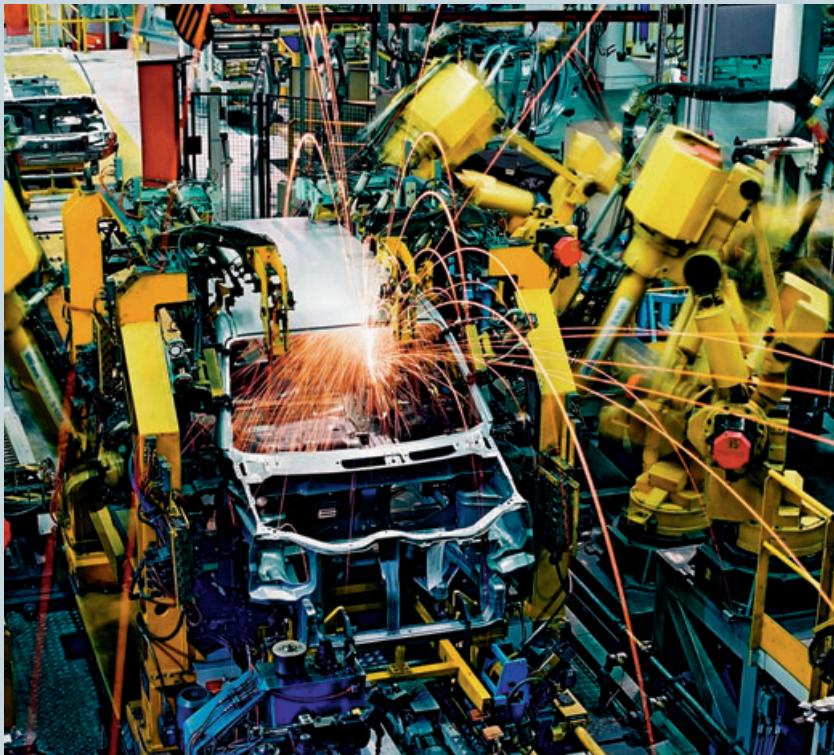

This makes them suitable for universal installation, meeting the highest requirements regarding personal safety.

Features

- All operations with closed high-voltage door
- Metallic enclosure, earthed shutters and partitions
- Internal arc classified switchgear according to IAC A FLR; (front, lateral and rear accessibility) for all short-circuit currents and an arc duration of 1 s, optionally 0.1 s
- Loss of service continuity category LSC 2B (separate partitions for busbar, connection and switching-device compartments)
- Partition class PM (metal-clad in pressure-resistant design)
- Unambiguous position indicators and control elements on the high-voltage door
- Use of vacuum circuit-breakers or contactors
- Standard degree of protection IP3XD; different degrees of protection possible as an option
- Positively driven shutters (separately lockable)
- Logical mechanical interlocking system.

Customer benefit

Increases productivity

Properties such as modular design, type tests of the switching devices in the switchgear, confinement of an internal arc to the respective compartment, and thus maximum operational reliability, contribute to optimum operation and a remarkable increase of productivity.

Features

- Loss of service continuity category LSC 2B
- Partition class PM
- Maximum degree of protection IP51 possible
- Positively driven shutters
- Use of standardized block-type current transformers
- Cable testing without isolating the busbar
- Functions such as establishment of the isolating distance, as well as feeder and busbar earthing, can be completely controlled from remote
- Confinement of an internal arc to the respective compartment up to 31.5 kA
- Use of maintenance-free vacuum circuit-breakers or contactors
- Control cables in metallic wiring ducts
- Easy access to all panel components.

The compact design of the NXAIR family pays twice for owners due to the use of the new SION circuit-breaker series.

On the one hand, building costs can be reduced in this way, and on the other hand, the maintenance-free circuit-breakers and the modular design enable continuous operation without expensive shutdown times.

Features

- Use of maintenance-free vacuum circuit-breakers or contactors
- Maintenance-free switchgear within up to 10 years
- Interruption of operation reduced to a minimum by logical mechanical interlocking system
- Minimized space requirements (reduced building investments)
due to compact design and flexible cable connection options
and / or flexible pressure relief duct systems.

Customer benefit

Preserves the environment

Air used as insulating medium, local production locations with short transportation ways and times, as well as a service life of more than 30 years, optimize the total energy balance.

Features

- As insulating medium, air is absolutely neutral to the environment
- Local production presence in all regions, minimized energy consumption (CO_2) regarding transport
- Service life of more than 30 years optimizes the energy balance additionally
- The materials used are fully recyclable without special knowledge
- Easy disposal.

Circuit-breaker switchgear NXAIR is factory-assembled, type-tested, metal-enclosed and metal-clad switchgear for indoor installation according to IEC 62271-2001/VDE 0671-200 and corresponds to the following classifications.

R-HA25-375.tif

Type approval

NXAIR switchgear has been type-approved by the following classification societies:

- Lloyd's Register
- DNV GL

The switchgear is therefore also approved for application on ships and platforms.

Loss of service continuity category and partition class	
Loss of service continuity category	LSC 2B
Partition class	PM
Accessibility to compartments	
Busbar compartment	Tool-based
Switching-device compartment	Interlock-controlled
Connection compartment	Interlock-controlled or tool-based
Internal arc classifications	
The following internal arc classifications are fulfilled: IAC A FLR, I_{sc}, t	
IAC	= Internal arc classification
A	= 300 mm distance of indicators for test (installation in closed electrical service location)
F	= Front arrangement of indicators for test
L	= Lateral arrangement of indicators for test
R	= Rear arrangement of indicators for test
I_{sc}	= Test current for NXAIR $\leq 17.5 \text{ kV}$ up to 50 kA = Test current for NXAIR 24 kV up to 25 kA
t	= Arc duration 1 s, optionally 0.1 s
In this way, NXAIR switchgear is suitable for unrestricted application (wall- or free-standing arrangement) in electrical service locations up to the maximum short-circuit ratings.	

National approval GOST

By certification in the system GOST R in Russia, NXAIR switchgear is approved for application at the voltage levels 6 kV, 10 kV and 20 kV. Compliance with the requirements of the GOST standard has been confirmed in the Declarations No. POCC DE.MM04.Д02090 and No. POCC DE.MM04.Д01640. The approval is valid in the countries Russia, Belarus, Kazakhstan and Ukraine.

Design

Basic panel design, operation

Operation at the panel

Features

- Integrated mimic diagram
- Display of the respective switch positions for circuit-breaker CLOSED/OPEN, disconnected position, earthing switch CLOSED/OPEN, on the integrated mimic diagram
- Unambiguous assignment of actuating openings and control elements to the corresponding position indicators
- All switching operations only with high-voltage door closed
- Ergonomically favorable height for all control and indicator elements
- Option: Verification of safe isolation from supply for feeder or busbar by means of the capacitive voltage detecting system with panel front closed.

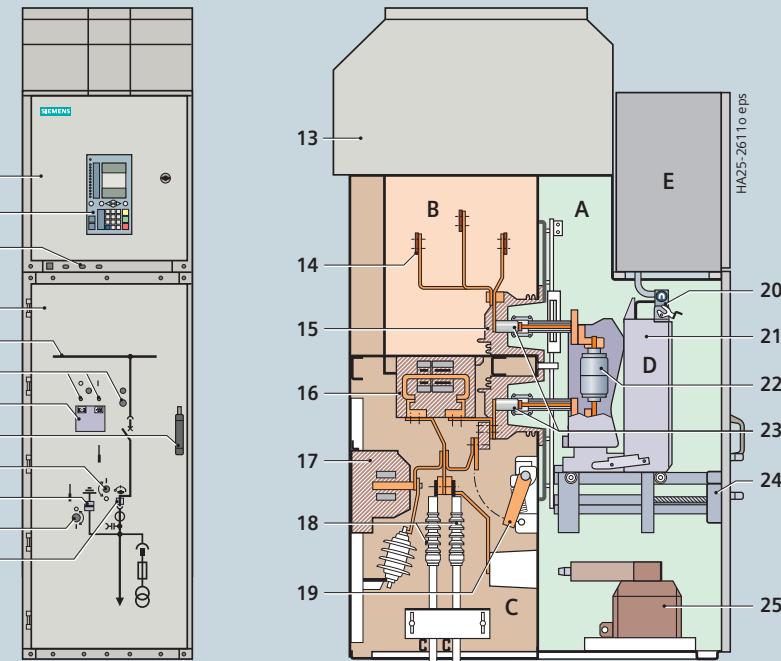

Interlocks

- Interlocking conditions specified according to IEC 62271-200 / VDE 0671-200 are fulfilled
- Feeder earthing switch can only be operated with switching device in disconnected position
- Switching device can only be racked on the movable part with the associated switching device OPEN position and with earthing switch OPEN
- Switching device can only be operated in interlocked disconnected or service position.

Beyond the specifications of the standards

- Coding prevents insertion of switching devices with a lower rated normal current into panels with a higher rated normal current
- Interlocking between the high-voltage door and the position of the withdrawable part
- Option: Electromagnetic interlocks, mechanical key interlocking systems, padlocks.

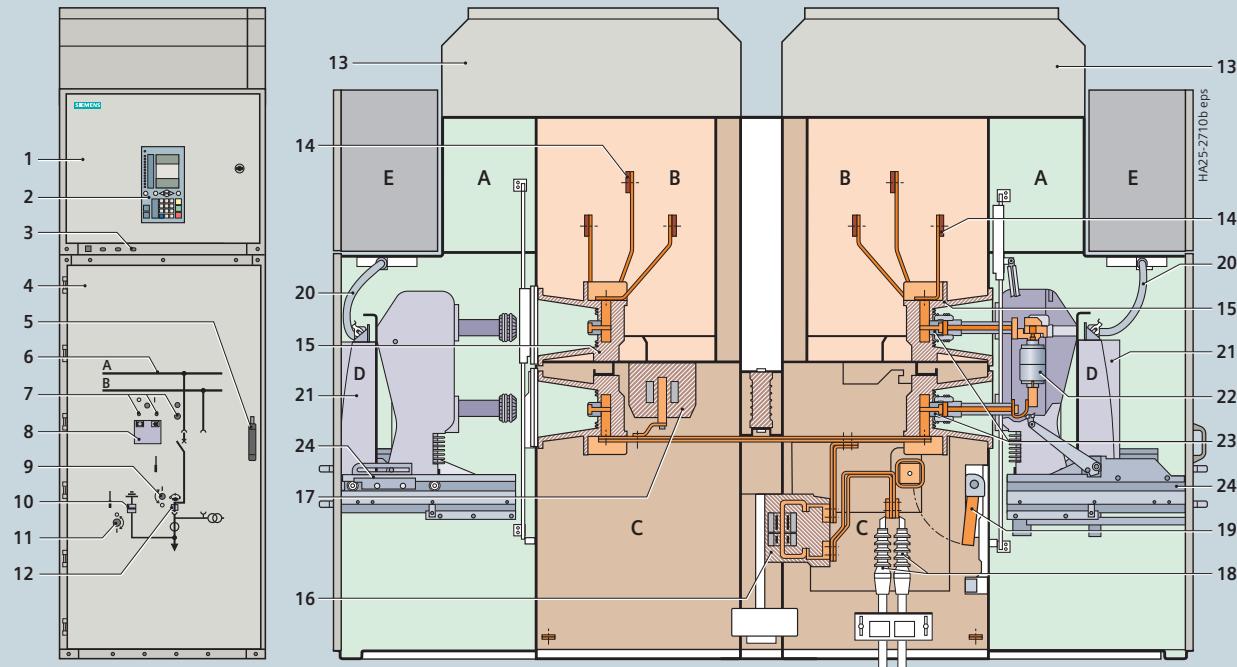

Basic panel design (example)

- 1 Door to low-voltage compartment
- 2 Protection device
- 3 Option: Capacitive voltage detecting system for feeder and busbar
- 4 High-voltage door
- 5 Mimic diagram
- 6 "CLOSE-OPEN" actuating openings for the circuit-breaker, opening for spring charging
- 7 Inspection window to recognize the "CLOSED-OPEN" indicator of the circuit-breaker, "closing spring charged" indicator, operations counter
- 8 Handle for opening the high-voltage door
- 9 Actuating opening for racking the switching device
- 10 Mechanical position indicator for feeder earthing switch
- 11 Actuating opening for feeder earthing switch, manual or optionally motor operation
- 12 Mechanical position indicator for withdrawable part
- 13 Pressure relief duct, if required with top-mounted arc absorber
- 14 Busbars
- 15 Bushing-type insulator
- 16 Block-type current transformer
- 17 Voltage transformer
- 18 Cable connection
- 19 Make-proof earthing switch
- 20 Low-voltage connection, plug-in type
- 21 Operating and interlocking unit for circuit-breaker
- 22 Vacuum interrupters
- 23 Contact system
- 24 Withdrawable part for racking the switching device and for earthing, manual or optionally motor operation
- 25 Option: Withdrawable voltage transformers

- A Switching-device compartment
B Busbar compartment
C Connection compartment
D Withdrawable circuit-breaker
E Low-voltage compartment

Basic panel design (example) – Duplex (back-to-back)

- 1 Door to low-voltage compartment
- 2 Protection device

Design

Compartments

Switching-device compartment

- Enclosure made of sendzimir-galvanized sheet steel
- Pressure relief upwards
- Panel front powder-coated with epoxy resin
- Standard color RAL 7035
- Separate shutter mechanism for opening and closing the
 - Busbar compartment
 - Connection compartment
- High-voltage door pressure-resistant in the event of internal arcs in the panel
- Pressure-resistant partitions to connection and busbar compartments
- Lateral metallic wiring duct for laying the control cables
- Low-voltage plug connector for connection of control cables between primary part and secondary part
- Switching-device compartment for the different panel versions with withdrawable devices:
 - Vacuum circuit-breaker¹⁾
 - Vacuum contactor
 - Disconnector link
 - Metering unit
- Endurance classes for:
 - Circuit-breaker: E2, M2, C2
 - Isolating distance (withdrawable part): M0 manually or partly motor-operated for withdrawable circuit-breaker and disconnector link
 - Vacuum contactor 250,000 or 500,000 × I_N

Busbar compartment

- Enclosure made of sendzimir-galvanized sheet steel
- Pressure relief upwards
- Option: Transverse partition from panel to panel for NXAIR
Standard: Transverse partition from panel to panel for NXAIR for 40 kA and 50 kA
- Busbars made of flat copper, bolted from panel to panel
 - Option: Insulated
- Pressure-resistant partitions to connection and switching-device compartment, pressure-resistant rear wall
- Shutters can be opened and locked separately
- Bushing-type insulators for supporting the busbars and for accommodating the upper fixed contacts for the switching device
- Option: Coupling electrode for capacitive voltage detecting system.

Additional compartments (option) for busbar components, see also product range

- Top-mounted compartment over the busbar compartment, within the pressure relief duct
- Separate pressure relief of the additional compartment via pressure relief flaps
- Options: Possibility of installing the following components (but not for panels with natural and forced ventilation, see also product range)
 - Voltage transformers
 - Make-proof earthing switch (endurance class: M0, E1), manual or optionally motor operation
 - Bar or cable connection.

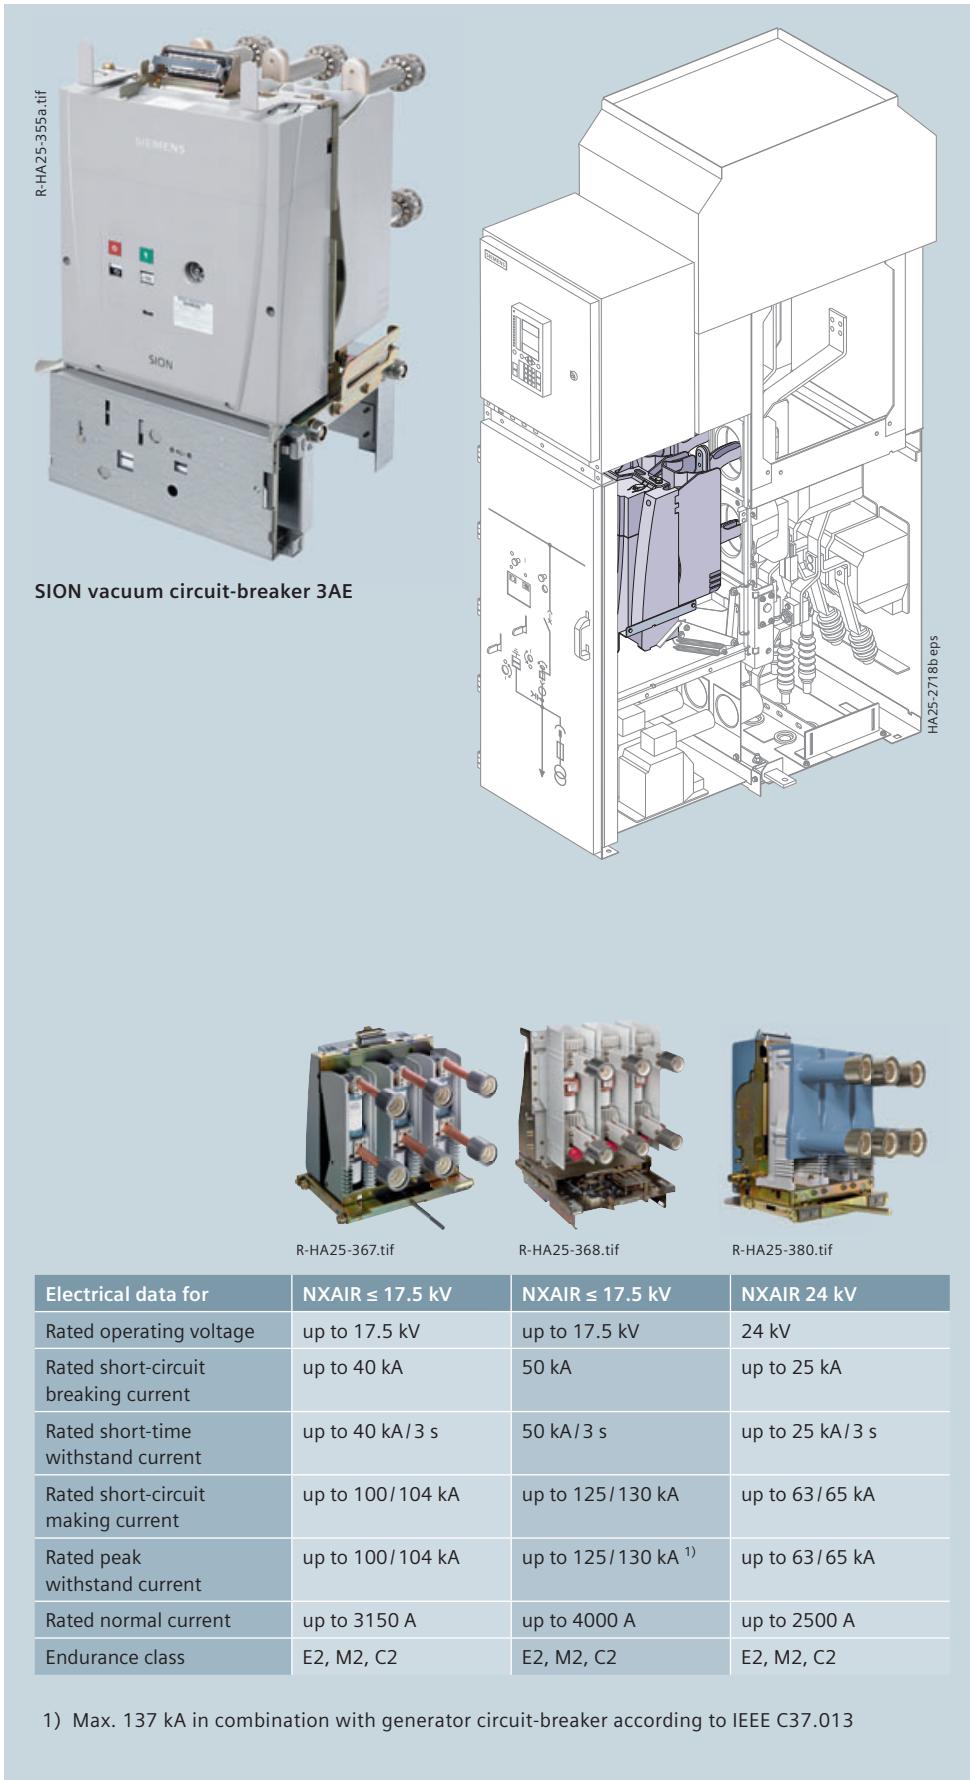

Connection compartment

- Enclosure made of sendzimir-galvanized sheet steel
- Pressure relief upwards through rear pressure relief duct
- Pressure-resistant partitions to switching-device and busbar compartments
- Shutters can be opened and locked separately
- Earthing busbar
- Option: Installation of bushing-type insulators or block-type current transformers
- Option: Coupling electrode for capacitive voltage detecting system
- Pressure-resistant floor cover
- Connection from front/bottom, or from rear/bottom, or from rear/top
- Suitable for connection of:
 - Single-core XLPE cables up to 6 x 500 mm² depending on the rated normal current and other built-in components
 - Three-core XLPE cables 3 x 240 mm² per panel depending on the rated normal current and other built-in components
 - Flat copper bars with bushings in a base plate or fully-insulated bars including floor cover
- Installation of voltage transformers
 - Cast-resin insulated
 - 3 x 1-pole
 - Fixed-mounted, without primary fuses
 - Or withdrawable with primary fuses in a separate compartment, with bushings and shutters to the connection compartment for NXAIR ≤ 17.5 kV; for NXAIR 24 kV withdrawable with fuses
- Make-proof earthing switch
 - With manual operating mechanism, optionally motor operating mechanism
 - In addition to the standard interlock: Earthing switch optionally lockable or electromagnetically interlocked against the withdrawable switching device
- Endurance class for earthing switch: M0, E1
- Surge arrester or surge limiter
 - Surge arrester for protecting the switchgear against external overvoltages
 - Surge limiter for protecting consumers against switching overvoltages while operating motors with starting currents ≤ 600 A.

1) Available for NXAIR 24 kV in combination with withdrawable HV HRC fuses in the connection compartment as switch-fuse function for particularly high demands regarding switching capacity and switching rate.

Features

- According to IEC 62271-100, VDE 0671-100
- In NXAIR for 15 kV, 50 kA also available as generator circuit-breaker according to IEEE C37.013
- Suitable for all switching duties
- Stored-energy spring mechanism with motor operating mechanism, manual operation always possible
- Circuit-breaker also available in combination with withdrawable HV HRC fuses in the connection compartment as switch-fuse function for particularly high demands regarding switching capacity and switching rate, for NXAIR 24 kV
- Racking the circuit-breaker with manual operating mechanism, optionally with motor operating mechanism
- 64-pole low-voltage plug connector between circuit-breaker and fixed part
- Maintenance-free operating mechanisms under normal climatic conditions and for the max. permissible number of operating cycles.

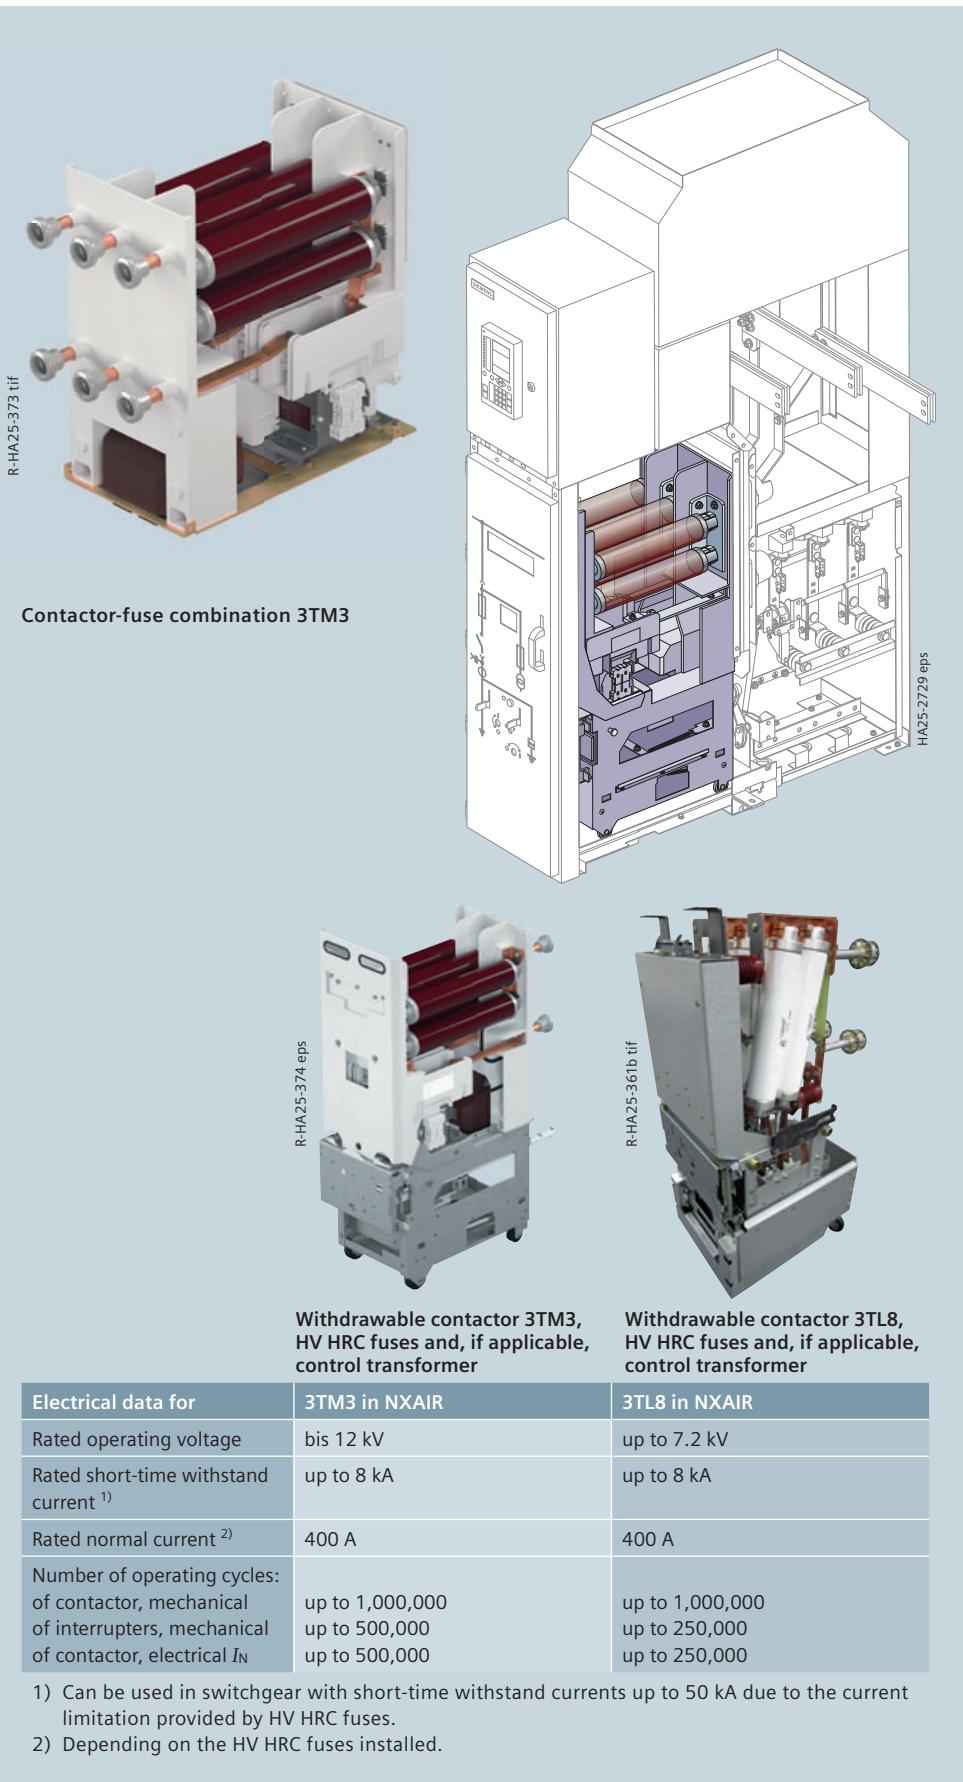

Components

Vacuum contactor

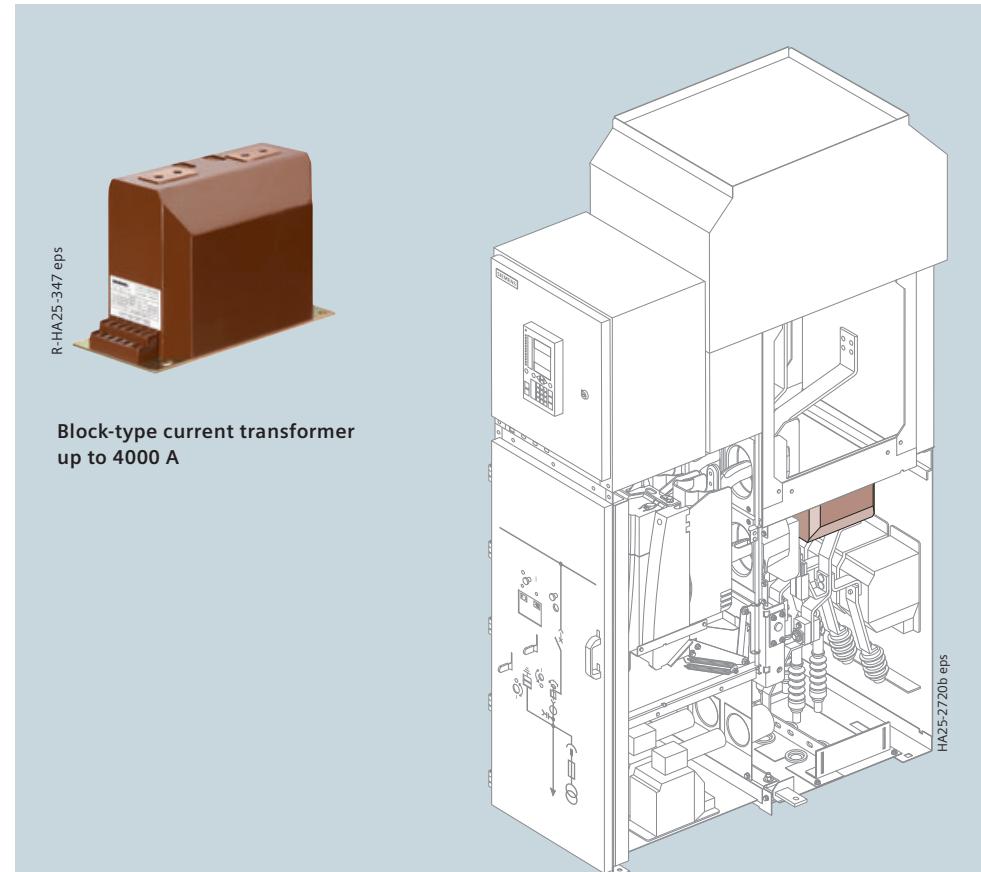

Features

- According to IEC 62271-106, VDE 0670-106
- Suitable for operating consumers with high switching rates
- Short-circuit protection via up to 2 HV HRC fuses connected in parallel
- Voltage supply of contactor coil via primary-fused control transformer or via external power supply
- Optional latching module for the contactor
- Racking the contactor via manual operating mechanism
- 64-pole low-voltage plug connector between contactor and fixed part
- Maintenance-free operating mechanisms under normal climatic conditions and for the max. permissible number of operating cycles
- Contact arms generally with silver-plated round contacts.

Features

- Inductive indoor support-type current transformer in block-type design according to IEC 61869-2, VDE 0414-9-2, standardized, available worldwide
 - Cast-resin insulated
 - Insulation class E
 - Narrow design according to DIN 42600 Part 8
 - Option:
 - With coupling electrode for capacitive voltage detecting systems for bushing-type current transformers
 - Secondary multiratio possible
- Current transformer with type test certificate and declaration of conformity.

Block-type current transformer
up to 4000 A

Electrical data for	
Operating voltage	up to 24 kV
Rated primary current	up to 4000 A
Short-time thermal current	up to 50 kA
Duration of short-time current	1 s or 3 s
Rated peak withstand current	up to 130 kA ¹⁾
Number of secondary cores	up to 3
Secondary current	1 A or 5 A
Accuracy classes	Measuring 0.2 – 1 FS5/FS10
	Protection 0.2 – 1 5P/10P
Rating	up to 30 VA

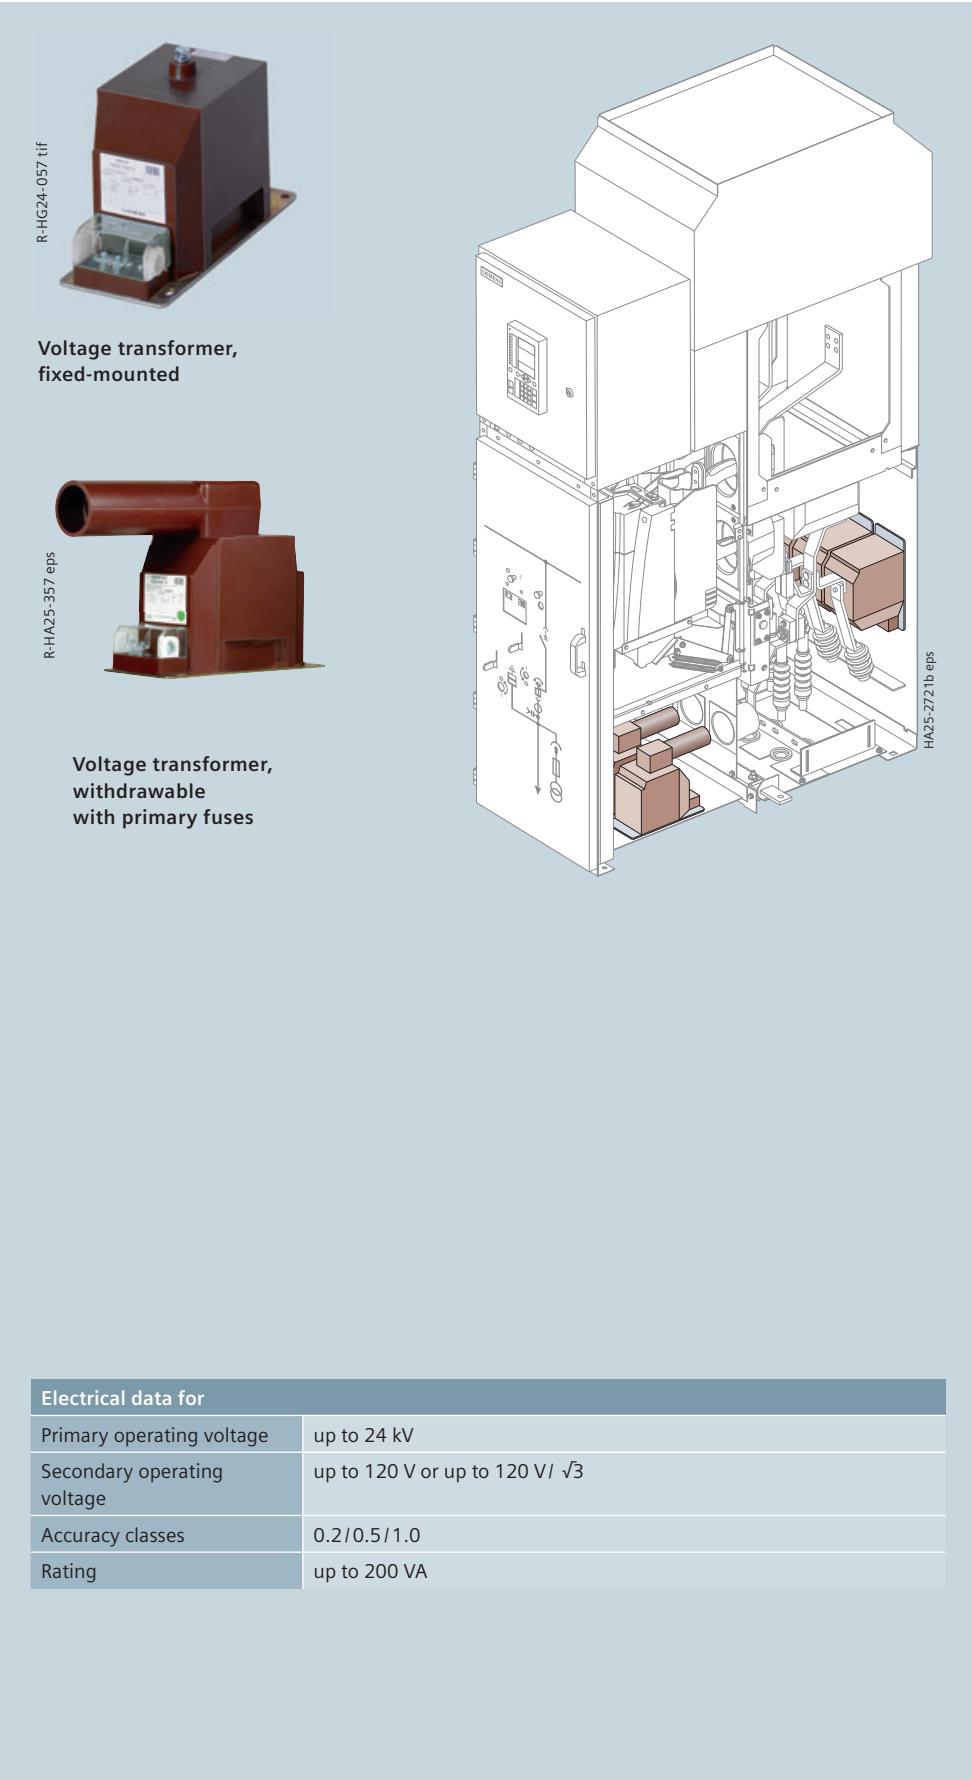

1) 137 kA, possible when combined with generator circuit-breakers

Components

Voltage transformers

Features

- Inductive principle according to IEC 61869-3, VDE 0414-9-3
 - Cast-resin insulated, single-pole
 - Insulation class E
 - Secondary connection via screw-type terminals
 - Option:
 - With earth-fault winding
 - Double-pole voltage transformer
 - Secondary multiratio possible.

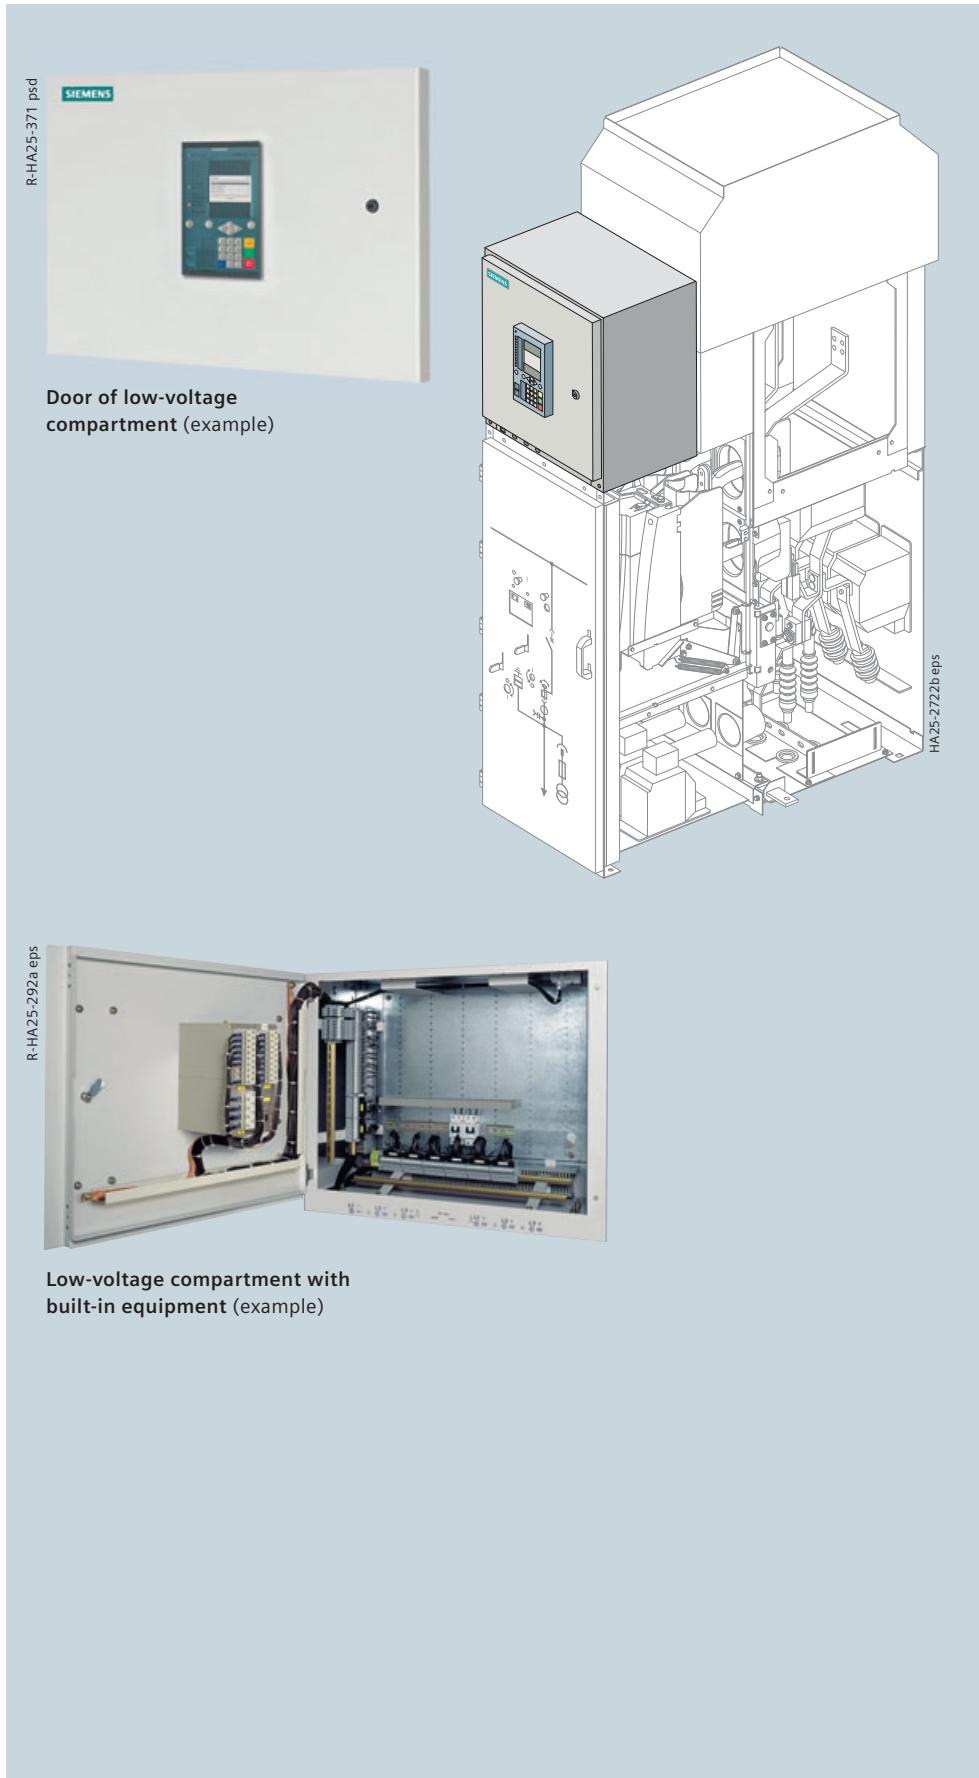

Electrical data for

Primary operating voltage	up to 24 kV
Secondary operating voltage	up to 120 V or up to 120 V/ $\sqrt{3}$
Accuracy classes	0.2/0.5/1.0
Rating	up to 200 VA

Features

- Low-voltage compartment for accommodation of all protection, control, measuring and metering equipment
- Partitioned safe-to-touch off the high-voltage part
- Low-voltage compartment can be removed, as all bus wires and control cables are plugged in
- Option: Test sockets for capacitive voltage detecting system at the feeders or the busbar
- Option: Higher low-voltage compartment
- Option: Separation wall from panel to panel
- Low-voltage cables are flexible and protected by metal covers
- Connection of withdrawable part and panel wiring to low-voltage compartment via 10-pole, coded plug connectors
- Bus wires are pluggable from panel to panel.

		Metering panel	—	800	800	800
		Contactor panel	$\leq 400 \text{ A}$	435/600	435/600	435
Height in mm	H1	Standard panel or standard panel with natural ventilation		2300	2300	2500
	H2	With higher low-voltage compartment or additional compartment for busbar components		2350	2350	2550
	H3	With forced ventilation		2450	2450	2650
	H4	With optional arc absorber ³⁾ for 12 kV, $> 25 \text{ kA}$, or generally for 17.5 kV		2500	2500	2680
Depth in mm	T	Single busbar, all panel types (except contactor panel)		1350 ⁵⁾	1500 ⁵⁾	1650
		Contactor panel		1400	1500	1650

1) 800 mm with forced ventilation

2) Dependent on rated normal current and design of bus riser panel

3) Number of absorbers dependent on switchgear configuration

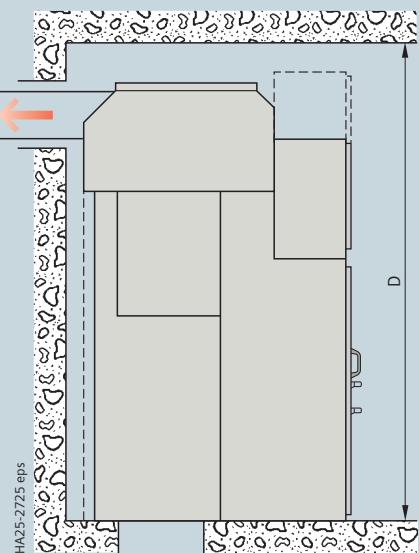

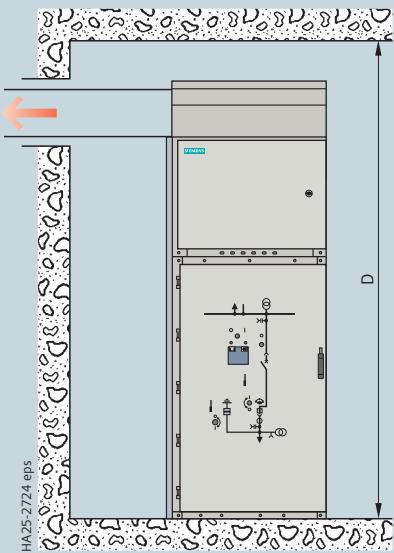

4) Disconnecting panel not in 600 mm

5) Panels with a rated normal current of 3150 A or 4000 A in 1540 mm depth

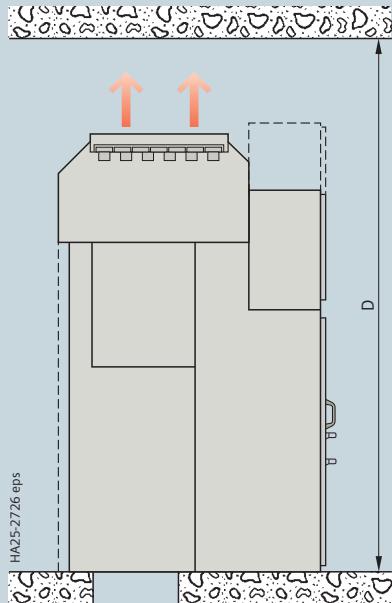

Technical data 17.5 kV

Room planning

Pressure relief out of the switchgear room through a pressure relief duct

Pressure relief into the switchgear room through absorbers

Lateral pressure relief duct

Rear pressure relief duct

Type of pressure relief	Rated voltage	Ceiling height D in mm for short-circuit current			
		25 kA	31.5 kA	40 kA	50 kA
Pressure relief into the switchgear room through absorbers	12 kV 17.5 kV	≥ 2800 ≥ 3500	≥ 3000 ≥ 3500	≥ 3500 ≥ 3500	≥ 3500 ≥ 3500
Pressure relief out of the switchgear room through a pressure relief duct	≤ 17.5 kV	≥ 2500	≥ 2500	≥ 2500	≥ 2700
Width of control aisle E (min.) for panel replacement	≤ 17.5 kV	1250	1250	1250	1350

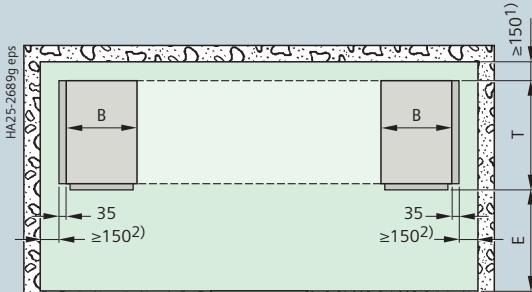

Single-row arrangement (plan view)

for single-busbar switchgear

For dimensions B (width) and T (depth), see table on page 21

For back-to-back and face-to-face arrangement, the room dimensions apply accordingly to those for single-row arrangement.

For back-to-back arrangement, a 1200 mm wide control aisle is required on the left or on the right of the switchgear.

1) For connection from the front ≥ 150 mm, 100 mm for contactor panel; for connection from the rear ≥ 500 mm

2) For designs with a closed pressure relief duct to the outside, a distance of ≥ 500 mm is required on one side

Transport

NXAIR 17.5 kV switchgear is delivered in form of individual panels.

Please observe the following:

- Transport facilities on site
- Transport dimensions and transport weights
- Size of door openings in building.

Packing

Means of transport: Rail and truck

- Panels on pallets
- Open packing with PE protective foil.

Means of transport: Seafreight

- Panels on pallets
- Sealed in PE protective foil, with closed wooden crate
- With desiccant bags
- With sealed wooden base
- Max. storage time: 6 months.

Means of transport: Airfreight

- Panels on pallets
- In wooden latticed crate with sealed upper and lower PE protective foil.

These transport and packing stipulations apply to the complete NXAIR product family. More information to transport dimensions/transport weights is given in the corresponding table.

NXAIR up to 40 kA

Transport dimensions, transport weights¹⁾ for individual panels

Panel widths	Transport dimensions Width x Height x Depth	Transport weight	
		with packing	without packing

NXAIR 24 kV

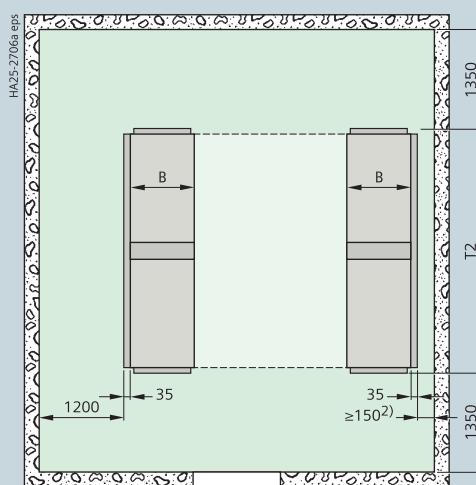

Arrangement (top view) for single-busbar switchgear

For dimensions B (width) and T (depth), see table on page 27

Double-busbar arrangement (top view)

For back-to-back arrangement, a 1200 mm wide control aisle is required on the left or on the right of the switchgear to have the possibility (if required) to bring a circuit-breaker from one row to the other.

- 1) For connection from the front $\geq 150 \text{ mm}$
for connection from the rear $\geq 500 \text{ mm}$
- 2) For designs with a closed pressure relief duct to the outside, a distance of $\geq 500 \text{ mm}$ is required on one side
- 3) In case of a lower ceiling height, please contact your Siemens partner

Transport

NXAIR 24 kV switchgear is delivered in form of individual panels.

Please observe the following:

- Transport facilities on site
- Transport dimensions and transport weights
- Size of door openings in building.

PackingMeans of transport: Rail and truck

- Panels on pallets
- Open packing with PE protective foil.

Means of transport: Seafreight

- Panels on pallets
- Sealed in PE protective foil, with closed wooden crate
- With desiccant bags
- With sealed wooden base
- Max. storage time: 6 months.

Means of transport: Airfreight

- Panels on pallets
- In wooden latticed crate with sealed upper and lower PE protective foil.

These transport and packing stipulations apply to the complete NXAIR product family. More information to transport dimensions/transport weights is given in the corresponding table.

Transport dimensions, transport weights¹⁾ for individual panels²⁾

Panel widths	Transport dimensions Width x Height x Depth	Transport weight	
		with packing	without packing
mm	mm x mm x mm	approx. kg	approx. kg
Transport by rail or truck			
1 x 800	1200 x 2980 ⁴⁾ x 1810	1340	1200
1 x 1000	1200 x 2980 ⁴⁾ x 1810	1440	1400
Transport by seafreight or airfreight³⁾			
1 x 800	1200 x 2500 x 2000	1410	1250
1 x 1000	1200 x 2500 x 2000	1410	1250

1) Average values depending on the degree to which panels are equipped

2) The double-busbar panels (back-to-back arrangement) are delivered as individual panels. Back-to-back connection is done on site

3) Pressure relief ducts or busbar components such as earthing switches or voltage transformers as separate delivery for 10 panels each (W 1100 x H 2000 x D 1800)

4) A height of 2450 mm is possible if the pressure relief duct is transported as a separate delivery

Standards

Standards, specifications, guidelines

Type of service location

The switchgear can be used as indoor installation according to IEC 61936 (Power Installations exceeding AC 1 kV) and VDE 0101

- Outside lockable electrical service locations at places which are not accessible to the public. Enclosures of switchgear can only be removed with tools
- In lockable electrical service locations. A lockable electrical service location is a place outdoors or indoors that is reserved exclusively for housing electrical equipment and which is kept under lock and key. Access is restricted to authorized personnel and persons who have been properly instructed in electrical engineering. Untrained or unskilled persons may only enter under the supervision of authorized personnel or properly instructed persons.

Dielectric strength

- The dielectric strength is verified by testing the switchgear with rated values of short-duration power-frequency withstand voltage and lightning impulse withstand voltage according to IEC 62271-1/VDE 0671-1 (see table "Dielectric strength").
- The rated values are referred to sea level and to normal atmospheric conditions (1013 hPa, 20 °C, 11g/m³ water content according to VDE 0111 and IEC 60071).
- The dielectric strength decreases with increasing altitude. For site altitudes above 1000 m (above sea level) the standards do not provide any guidelines for the insulation rating, but leave this to the scope of special agreements.
- Site altitude
 - As the altitude increases, the dielectric strength of insulation in air decreases due to the decreasing air density. This reduction is permitted up to a site altitude of 1000 m according to IEC and VDE.
 - For site altitudes above 1000 m, a higher insulation level must be selected. It results from the multiplication of the rated insulation level for 0 to 1000 m with the altitude correction factor K_a .

Standards

The switchgear complies with the relevant standards and specifications applicable at the time of type tests.

Overview of standards (August 2017)

		IEC standard	VDE standard	EN standard
Switchgear	NXAIR	IEC 62271-1 IEC 62271-200	VDE 0671-1 VDE 0671-200	EN 62271-1 EN 62271-200
Devices	Circuit-breakers Vacuum contactors Disconnectors and earthing switches Switch-disconnectors Switch-disconnector/fuse combination HV HRC fuses Voltage detecting systems	IEC 62271-100 IEC 62271-106 IEC 62271-102 IEC 62271-103 IEC 62271-105 IEC 60282-1 IEC 61243-5	VDE 0671-100 VDE 0671-106 VDE 0671-102 VDE 0671-103 VDE 0671-105 VDE 0670-4 VDE 0682-415	EN 62271-100 EN 62271-106 EN 62271-102 EN 62271-103 EN 62271-105 EN 60282-1 EN 61243-5
Degree of protection	IP-Code IK-Code	IEC 60529 IEC 62262	VDE 0470-1 VDE 0470-100	EN 60529 EN 50102
Insulation	–	IEC 60071	VDE 0111	EN 60071
Instrument transformers	– Current transformers Voltage transformers	IEC 61869-1 IEC 61869-2 IEC 61869-3	VDE 0414-9-1 VDE 0414-9-2 VDE 0414-9-3	EN 61869-1 EN 61869-2 EN 61869-3
Installation, erection	–	IEC 61936-1	VDE 0101-1	EN 61936-1

In accordance with the harmonization agreement reached by the countries of the European Union, their national specifications conform to the IEC standard.

Table – Dielectric strength

Rated voltage (r.m.s. value)	kV	7.2	12	15	17.5	24
Rated short-duration power-frequency withstand voltage (r.m.s. value)						
– Between phases and to earth	kV	20	28	36	38	50
– Across isolating distances	kV	23	32	40	45	60
Rated lightning impulse withstand voltage (peak value)						
– Between phases and to earth	kV	60	75	95	95	125
– Across isolating distances	kV	70	85	105	110	145

Altitude correction factor K_a

Rated short-duration power-frequency withstand voltage to be selected for site altitudes > 1000 m

≥ Rated short-duration power-frequency withstand voltage up to ≤ 1000 m · K_a

Rated lightning impulse withstand voltage to be selected for site altitudes > 1000 m

≥ Rated lightning impulse withstand voltage up to ≤ 1000 m · K_a

Example:

3000 m site altitude above sea level,

17.5 kV switchgear rated voltage,

95 kV rated lightning impulse withstand voltage

Rated lightning impulse withstand voltage to be selected =
95 kV · 1.28 = 122 kV

Result:

According to the above table, a switchgear for a rated voltage of 24 kV with a rated lightning impulse withstand voltage of 125 kV is to be selected.

Current carrying capacity

- According to IEC 62271-200 or IEC 62271-1, VDE 0671-200 or VDE 0671-1, the rated normal current refers to the following ambient air temperatures:
 - Maximum of 24-hour mean + 35 °C
 - Maximum + 40 °C
- The current carrying capacity of the panels and busbars depends on the ambient air temperature outside the enclosure.

Internal arc classifications

- Protection of operating personnel by means of tests for verifying the internal arc classification
- Internal arcing tests must be performed in accordance with IEC 62271-200 or VDE 0671-200
- Definition of criteria:
 - Criterion 1: Correctly secured doors and covers do not open, limited deformations are accepted.
 - Criterion 2: No fragmentation of the enclosure, no projection of small parts above 60 g
 - Criterion 3: No holes in accessible sides up to a height of 2 m
 - Criterion 4: No ignition of indicators due to hot gases
 - Criterion 5: The enclosure remains connected to its earthing point.
- Beyond the standards mentioned above, NXAIR switchgear up to 31.5 kA/1s is optionally provided with confinement of an internal arc to the respective compartment.

Aseismic capacity (option)

NXAIR switchgear can be upgraded for regions at risk from earthquakes.

For upgrading, earthquake qualification testing has been carried out in accordance with the following standards:

- IEC /TS 62271-210 "Seismic qualification for metal enclosed switchgear and controlgear for rated voltages above 1 kV"
- IEC 60068-3-3 "Guidance – seismic test methods for equipment"
- IEC 60068-2-57 "Test Ff: Vibration – Time-history method"
- IEC 60068-2-6 "Environmental testing part 2-6: Test Fc: Vibration (sinusoidal)"
- IEEE 693-2005 "Recommended Practice for Seismic Design of Substations".

For installation on even and rigid concrete or steel structure (without considering building influences), the tested ground accelerations meet the following requirements:

- Uniform Building Code 1997 (UBC) – Zone 4
- IEEE 693-2005 – High required response spectrum (Figure A.1).

Shock, vibration (option)

NXAIR switchgear can be upgraded to withstand stress caused by shock and vibration. For upgrading, shock and vibration tests have been carried out in accordance with the following standards:

- ETSI EN 300 019-2-2; T2.3 Public Transportation
- IEC 60721-3-2 Classification of environmental conditions Section 2: Transport.

Color of the panel front

RAL 7035 (light gray).

The NXAIR switchgear is suitable for application in indoor installations under normal operating conditions as defined in the standard IEC 62271-1.

• Temperature	-5 °C up to +55 °C -25°C up to +55°C ¹⁾ (optional)
• Relative air humidity	Mean value over 24 hours ¹⁾ : ≤ 95 % Mean value over 1 month: ≤ 90 %
• Condensation	Occasionally Frequently (degree of protection min. IP31D, with anti-condensation heater in the low-voltage part ²⁾)
• Site altitude	Altitude correction to be considered (see page 30)
• No significant pollution of the ambient air (dust, gases, vapors, salts).	

Furthermore, the high-voltage part of the NXAIR switchgear can be used in environmental conditions of the climatic category 3K3 and 3K5 according to the standard IEC 60721-3-3.

NXAIR has been subjected to a climatic test according to IEC 60932, Level 2, and is suitable for operating conditions according to "Design Class 2". This test also meets the requirements of IEC 62271-304 for "Design Class 2".

Recycling

The switchgear can be recycled in ecological manner in compliance with existing legislation. Auxiliary devices such as short-circuit indicators have to be recycled as electronic scrap. Batteries have to be recycled professionally.

Terms

"Make-proof earthing switches" are earthing switches with short-circuit making capacity according to

- IEC 62271-102 and
- VDE 0671-102/EN 62271-102.

Protection against solid foreign objects, electric shock and water

NXAIR switchgear fulfills according to the standards

IEC 62271-1	VDE 0671-1, EN 62 271-1
IEC 62271-200	VDE 0671-200, EN 62 271-200
IEC 60529	VDE 0470-1, EN 60 529
IEC 62262	VDE 0470-100, EN 50 102

the following degrees of protection:

Switchgear panel	NXAIR ≤ 17.5 kV	NXAIR 24 kV
Degree of protection for the enclosure optionally	IP3XD IP4X, IP50, IP51	IP3XD IP4X IP50, IP51
Degree of protection for the enclosure with ventilation	IP3XD IP4X	IP3XD IP4X
Degree of protection for the partitions	IP2X	IP2X
Degree of protection for the enclosure against mechanical impacts from outside	IK07	IK07

For secondary devices in the low-voltage door, the stipulations of the IP degree of protection apply according to the definitions for the switchgear enclosure.

1) Secondary devices (e.g. protection devices, meters, measuring transducers, etc.) must be suitable for the given operating conditions

2) Heater in the low-voltage compartment and operating mechanism box of the circuit-breaker
